

EXCAVATION & SHORING WORKS

Domegrove Pty Ltd

Pymont, N.S.W.

The Quay Point Apartments are situated on the headland at Pymont.

Hannas' works involved remediation of contamination on the site, bulk excavation in sandstone, and permanent shoring works.

Due to the proximity of nearby residents and heritage structures, vibration and environmental considerations on the project were of the utmost importance. Over the course of the project, Hannas maintained very good relations with adjoining residents, and completed the project without objection from nearby residents, or Sydney City Council.
